Want to learn how to plant a pollinator friendly garden?

Turn the pages to find out!
The best way to attract pollinators is to provide nectar and pollen sources by planting clusters of flowering plants.
Pick plants with different colors and shapes to bring more types of pollinators to your garden. To start plants off right, use a 50:50 mix of native soil and Miracle-Gro® Garden Soil for Flowers.
Choose lots of different plants to ensure continuous bloom cycle, providing spring-to-fall food and nectar.
Plant native plants when possible because they require fewer pesticides than non-native plants. Talk to your local nursery or cooperative extension agency about which plants are best for your region.
Protect plants from harmful creatures with Miracle-Gro® Nature's Care® Garden Insect Control.
